SDS E-Business Server®
Encryption News: January 2019

Keeping your confidential information confidential

Every organization sends valuable data in emails and attached files both internally or to remote offices and partners. Not all of them enjoy the benefits of using E-Business Server, which automatically protects your valuable data.

As an E-Business Server user, you get the benefit of automatic encryption – strong encryption algorithms automate your data protection and provide consistent security.

In addition, E-Business Server supports industry standards, protocols, and self-decrypting archives, which means that your organization can share secure data with partners that don't have encryption.

Plus, you can protect data on almost any network server running the most popular operating systems. E-Business Server automatically converts EBCDIC to ASCII text files and *vice versa*, for easy integration with other products.

If you want to learn about several different ways to secure z/OS file transfers, you can watch our updated Peeling the Onion tutorial. There is a PGP encryption "layer" that discusses the Pros/Cons and common uses of PGP encryption during the file transfer process. A demo of E-Business Server in action is also provided.

For more details, view the SDS E-Business Server Datasheet. Please email info@sdsusa.com to request additional information or a 30-day free trial.

SDS
Quality Software since 1982

Software Diversified Services delivers comprehensive, affordable mainframe and distributed software with a focus on cybersecurity and compliance.
