

SDS E-Business Server[®]

Encryption News: April 2019

Stay Compliant – Protect your Data

Regulations like GDPR apply to every company that possesses or controls personal data (*PII: Personally Identifiable Information*) of anyone residing in the EU. The truth is, even if GDPR doesn't affect your organization directly, many countries throughout the world and U.S. States have similar legislation passed or in the works.

To stay compliant with GDPR and other compliance regulations, you need to protect PII and other confidential data. What's more, you need a way to easily ensure that data in all states (at-rest, in-motion) is protected.

That's where [SDS E-Business Server](#) comes in. It offers strong encryption that integrates with the widest range of applications and platforms, including the mainframe. To make life easier for users, E-Business Server comes with APIs for C/C++ and Java for use on AIX, HPUX, Linux, Solaris, and Windows. Plus, there are APIs for REXX on z/OS. And users can easily embed security into applications or batch processing using mainframe scripting or native APIs.

Not only is there a mainframe version of the software (currently at Version 7.9.3), but you can also get the advantages of using E-Business Software on AIX, HPUX, Linux, Solaris, and Windows (Version 9.0.2). Now you can protect your data and stay compliant with regulations on all your computing platforms.

Find out how SDS E-Business Server can help your organization's security and compliance needs:
