

Key Features & Benefits

Rock-solid PGP Encryption

E-Business Server was a part of the original PGP software and uses industry-standard algorithms to ensure data security.

Follows OpenPGP Standard

The OpenPGP Standard is widely used by organizations that work with remote partners and depend on data remaining secure at all times.

Automatic File Compression

E-Business Server encrypts data while it's at rest and provides excellent file compression. Especially helpful when storing data long term.

APIs make Integration Simple

Easily embed encryption for data security into applications or batch processing using mainframe scripting or native APIs.

Multi-platform Versatility

E-Business Server is available for world-class encryption on the z/OS mainframe along with Windows, Linux, AIX, and other platforms.

FIPS-validated Encryption

On Windows, Linux, and AIX, there is a version available that utilizes the FIPS-140-2-validated SDS Cryptographic Module.
