

# Visual Screen Redesigner • VSR

## Transform Legacy 3270 Screens Into User-Friendly Web Pages

Visual Screen Redesigner creates modern web pages from legacy screen UIs – no HTML expertise required!

VSR is faster to implement than traditional modernization solutions, yet much less expensive. VSR runs on the mainframe and leverages Virtel thin-client (browser-based) 3270 TE infrastructure.

Mainframe application developers who are familiar with the legacy screens can use VSR to update the UI, and they don't need web skills such as HTML5 or JavaScript. They also don't need to develop and test new screenless transactions or web services.

VSR includes templates to accelerate deployment. Tips for layout, color themes, and navigation help create visually appealing and intuitive interfaces. Screens can be deployed in phases, from highly-used to less-used screens.

With easy implementation that retains performance and security, VSR transforms your legacy application into a modern, simplified interface.

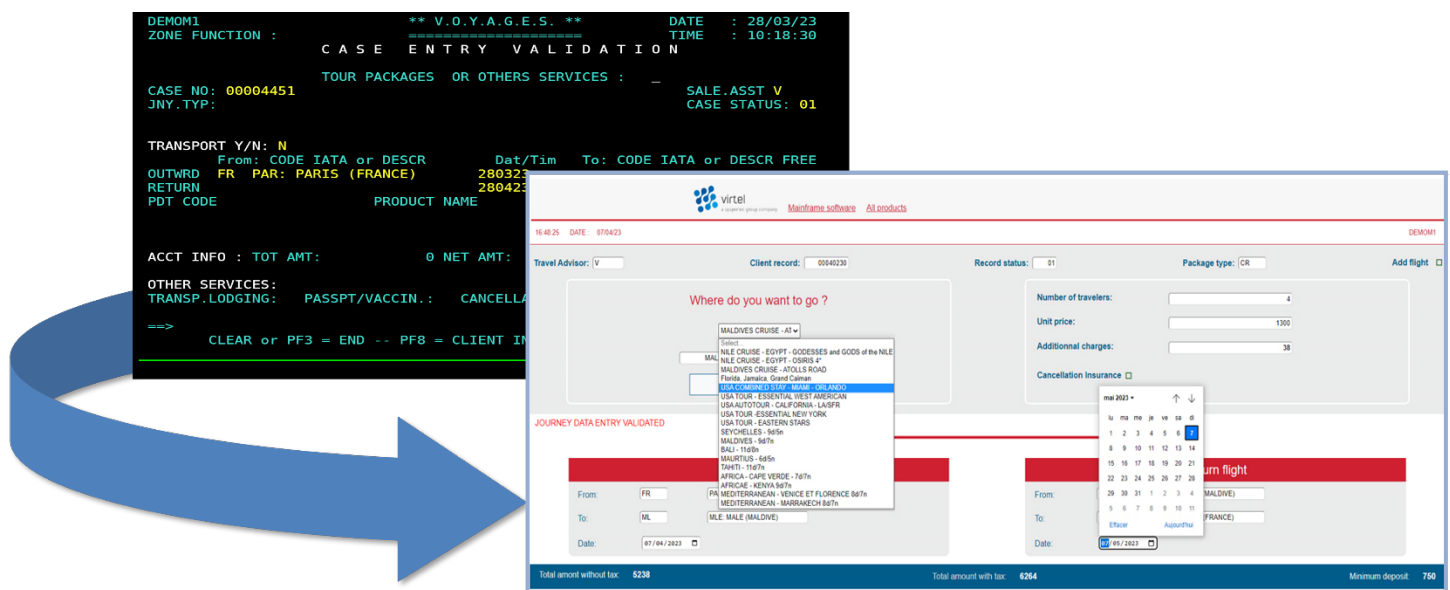

VSR delivers:

- Improved user experience
- Increased productivity
- Reduced maintenance

Includes helpful features to create usable and visually engaging screens:

- Drag-and-drop interface design
- Customizable widgets
- HTML templates
- Real-time preview

**Visual Screen Redesigner  
is now part of  
Virtel Web Suite**
